- (d) this avoids smoking conventional cigarettes

Compréhension écrite – Partie 1

What time does the butcher's _____?

- A. open
- B. opens
- C. opening
- D. opened

Public _____ is divided on that issue.

- A. thoughts
- B. advice
- C. opinion
- D. mind

They don't fly for fear of _____ hijacked.

- A. be
- B. is
- C. being
- D. been

Compréhension écrite – Partie 2

From Butte, Mont., to Hagerstown, Pa., more than 100 small and medium-size cities across the US will see reductions in airline service by year's end. Some communities will lose commercial service altogether. Surging oil prices, driving up the cost of jet fuel, are behind the cuts. For the first time in aviation history, airlines are forced to reduce the number of flights offered and eliminate some destinations even as demand for their services remains high.

The result: It will be harder for many Americans to get from where they are to where they want to go, planes will remain elbow-room-only packed, and ticket prices will soar higher. The aviation reductions will also produce economic ripples that extend far beyond those airports with newly empty tarmacs, some aviation experts warn. "This is not about Butte. This is about the national economy," says Roger Cohen, president of the Regional Airline Association. "Commercial air service is part of the backbone of the American economy.... All of the industries that have grown up with cheap, competitive airfares over the last decade will be affected."

First question. What is causing the increase in the price of jet fuel?

- A. Airline cutbacks
- B. New airlines
- C. Rising oil prices
- D. An increase in the number of passengers

Second question. Which one of the following is NOT true?

- A. Routes are being cut because no-one wants to fly from these cities.
- B. Tickets for the summer flying season were sold before these changes.
- C. Industries accustomed to cheap airfares will be impacted.
- D. This decision will eliminate overcrowding.
